

Extend the life of your sieve with the Russell Clamp Assist

The Russell Clamp Assist protects your sieve from damage and ensures optimum performance by correctly tightening your clamps.

Improves containment of your product

- Eliminates leakage caused by loose clamps or uneven clamp pressure around the sieve deck
- Prevents leaks caused by damaged components, saving your valuable product
- Reduces the noise level during sieve operation with correctly tightened clamps

Extends the life of your consumable parts

- Reduces wear on your gaskets, clamps and clamp pads, extending their life and lowering your running costs
- Ensures your sieve operates at optimum performance for longer

Lengthens the life of your sieving equipment

- Prevents damage to your sieve caused by over tightened clamps. Repairing or replacing dented and warped components can be expensive
- Lengthens the life of your clamps by preventing your operators from using excessive force and over-tightening

Flexible use

- Suitable for all styles and sizes of Russell Compact and Finex sieve ranges

Simple to use

- The pre-set tool ensures operators apply the correct force to the clamp handle every time

Clamps which are over-tightened or too loose result in your machine components becoming dented or warped. This causes excessive wear to your seals, gaskets and clamps. The Russell Clamp Assist ensures that your operators set your sieve clamps to the correct force, maximizing the life of your equipment and lowering your running costs.

The Russell Clamp Assist is ideal for use with Compact Sieve toggle clamps and underclamps as well as toggle clamps for the Finex range of sieves.

Call us today to find out how we can improve the performance of your Russell Finex sieve and lower your costs
